

Explanation of Contact Lens Service

- A contact lens fitting and/or evaluation is *not* part of a routine exam and is *not* usually covered by insurance.
- The fitting and evaluation fee depends on several factors and ranges from \$58.00 to \$108.00. Included in this fee are 2 additional follow-up visits (*within 60 days*), solutions and trial contact lenses, if applicable.
- The charge for any additional follow-up visits will be \$38.00. Medical visits will be billed through insurance if the patient is covered and we participate with the insurance company.
- The contact lens fitting and evaluation includes additional testing that is *not* included in a routine eye exam and *is done every year* in order to monitor the health of the eyes with the use of contact lenses. **Contact lens prescriptions expire after 1 year.**
 - The additional testing includes a topographical mapping of the cornea, auto-keratometry and analysis of corneal shape, condition and health of the eye. This will help the doctor determine the best contact lenses for you.
- For patients that are new to contact lenses, a complete instruction on insertion, removal, care and handling techniques will be given by a trained technician for an additional fee of \$20.00. *It is our policy that contact lenses will be dispensed only when the technician feels the patient can handle them correctly.*
- Exchanges or credits will be given on unopened/undamaged materials due to Doctor required changes only and a 20% restocking fee will be charged.

I have read and agree to the above conditions
